## **DETAILED ACTION**

This office action is in response to the preliminary amendment filed July 10, 2003.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 5, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Legler, U. S. Patent 2,243,912 in view of Orlando, U. S. Patent 3,148,856. Legler teaches a display stand comprising a frame member 11 and 13, a sign or banner member 18 supported by the frame member, and a mounting means for mounting the first member onto a surface. The mounting means has a suction cup 10 with a bore (not labeled) adapted to receive the head a screw or bold 12. The distal end of the threaded shaft portion of the bolt is secured to the lower end of the frame member 11. Legler does not teach the connector having internal and external threads and the frame being plastic.
- 3. Raphael et al. teaches a plastic suction cup 28 connected to a post 26. The connection assembly comprises a suction cup 28, a screw 35 extending through the top portion of the suction cup, a first leg member/connector has internal threads adapted to receive the threaded shank of the screw and external threads 27 adapted to be received in a second leg member/connector. It would have been obvious to one having ordinary

skill in the art at the time this invention was made to construct the connection assembly of the suction cup taught by Legler with the connector with internal and external threads as taught by Raphael et al. provide a means extend the length or the vertical height of the frame member.

- 4. Since the applicant does not disclose that constructing the frame member of plastic material solves any stated problem or is for any particular purpose, it appears that construct the frame member of any suitable material as taught by Legler would perform equally well is supporting the display.
- 5. With respect to claim 2, the examiner takes Official Notice that signs made of cloth-type material is old and well known in the art and would have been obvious to one having ordinary skill in the art at the time this invention was made to provide a means to allow the flag to blow in the wind.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Legler in view of Raphael et al. and Rabkin, U. S. Patent 5,502,909. Rabkin teaches a banner having a support assembly on each side of the banner. It would have been obvious to one having ordinary skill in the art the time this invention was made to construct the display taught by Legler and Raphael et al. with a support assembly on both side of the sign to provide a means to hold the flag in an extended orientation and taunt.

## Response to Arguments

6. Applicant's arguments with respect to claims 1, 4, and 4 have been considered but are most in view of the new ground(s) of rejection.
